

Yash Yadav

Senior Backend Engineer

India | yashyadav.710@outlook.com | +91-81042 71666 | linkedin.com/in/ohyash/ | ohya.sh/ | github.com/ohyash

Summary

Senior Backend Engineer with 7+ years of experience building and owning high-scale backend systems in high-growth startups. Expert at taking features from 0 to 1, skilled at driving architectural decisions under real product constraints, resolving mission-critical technical blockers, and shipping reliable systems with minimal operational overhead.

Experience

Senior Backend Engineer – TestGorilla

Remote | October 2022 – Present

- Own a core backend system processing **30M+ requests/month**, maintaining a **<0.1% error rate** and **p95 latency under 150ms** with near-zero on-call burden.
- Designed the technical approach for Testgorilla's **self-serve assessment flow** - Shifting the platform from customer-initiated to candidate-initiated. Achieved by extending the existing framework instead of rewriting it; scaled to **52K+ candidates** at a **78% completion rate** with **near-zero** post-launch **defects**
- Solo-built a fully functional ATS demo integrated with the existing TestGorilla app in a 2-day company-wide hackathon (2026)
- Shipped full localization support across multiple languages, resolving containr-level font rendering, PDF generation related issues, and headless chrome limitations that were blocking international expansion
- Designed feature-flag-driven cohorts and A/B testing infrastructure, that enabled faster experimentations without redeployments.
- Raised and addressed security risks in identity verification workflows; proposed multi-layered account-blocking measures to reduce fraud
- Helped bootstrap release management practices and mentored teammates through high-quality PR reviews.

Software Engineer – Digital Guardian

Remote (Hyderabad, India) | March 2021 – September 2022

- Built a performance profiling library for production code, identifying bottlenecks that led to a **54% throughput increase**.
- Transitioned SDK systems engineering from Linux to FreeBSD, resolving memory leaks and boosting **performance by 70%** through optimized compiler configurations

Software Engineer – MAQ Software

Mumbai, India | April 2019 – March 2021

- Contributed to breaking down a monolithic backend into a microservices-based, Azure-native architecture, improving deployment independence and system scalability
- Designed and improved CI/CD pipelines for web applications and NuGet packages, enabling reliable, repeatable deployments and faster release cycles

Additional work experience available at ohya.sh/work/

Projects

AI-Powered Mental Health Platform

- Built a HIPAA-principled backend using OpenAI API and Supabase to automate therapeutic workflows.
- Designed multi-role portals (Patient, Therapist, Admin) with robust Role-Based Access Control (RBAC).

Additional projects available at ohya.sh/projects/

Skills

Languages & Frameworks: Python, TypeScript, C#, SQL, Django, ASP.NET, Node.js

Systems & Infra: AWS, Docker, CI/CD, PostgreSQL, Redis

AI Systems: RAG, LangChain, Vector Embeddings, OpenAI API

Education

B.Tech in Computer Science | CGPA: 8.69

Lovely Professional University, Punjab, India | 2015 – 2019

Achievements / Highlights

- Winner, TestGorilla Company-wide Ideathon (Croatia, 2024)
- Recognized internally for engineering judgment and PR review quality
